

## DATA SHEET

### **APIXEL Comet**

Learning Record Store

Comet is a software package by Apixel Pty Ltd that enables the management and delivery of online content to users (learners). It is web-based to facilitate “anytime, anyplace, any pace” access to learning and administration.

It allows for user registration, delivery of lessons, user assessment, and provides extensive reporting in an online environment. It does not include features such as skills-gap analysis, succession planning, professional certification, or resource allocation (venues, rooms, etc.)

The focus of Comet is to manage users, keeping track of their progress and performance across all courses. It performs administrative tasks such as reporting but does not create course content. It also allows for end user customisation of the user interface (branding).

Within Comet a course can also include web-based content such as Adobe Acrobat.

Comet reduces administration and provides simplicity and ease of use not typically found in “enterprise” LRS systems.

### **System Requirements**

A web server capable of running ASP 3.0 (classic ASP) pages with JScript as the scripting language (for example, IIS).

Installed database drivers for the chosen database (either MS Access or SQL Server).

A modern browser.
